

Grade 2 – Science

Topic: Photosynthesis

Beginner Level

Explanation:

- Photosynthesis is the process by which plants make their own food.
- Plants need sunlight, water, and air to make food.
- Leaves are usually green because they contain a substance called chlorophyll.
- Plants use sunlight to prepare food in their leaves.

Examples:

- Plants grow well when they get enough sunlight.
- A plant kept in a dark room may not grow properly.

Learning Outcome:

- Understand that plants make their own food.
- Identify sunlight, water, and air as important for plants.
