

Grade 2 – Science

Topic: Photosynthesis

Intermediate Level

Explanation:

- Photosynthesis happens mainly in the leaves of plants.
- Plants take in carbon dioxide from the air through tiny openings in leaves.
- Roots absorb water from the soil.
- Sunlight provides the energy needed for plants to prepare food.
- Oxygen is released into the air during photosynthesis.

Examples:

- Plants help provide oxygen for humans and animals.
- Water + Carbon dioxide + Sunlight → Food + Oxygen (simple form).

Learning Outcome:

- Explain how plants make food.
- Understand the role of leaves, roots, and sunlight.
