

Grade 2 – Division

Advanced Level

Concepts:

- Division word problems
- Relationship between multiplication and division
- Missing number division problems
- Equal grouping and sharing in real-life situations

Examples:

- $24 \div 6 = 4$
- $\underline{\quad} \div 5 = 7 \rightarrow 35 \div 5 = 7$
- $36 \div 4 = 9$ (Check: $9 \times 4 = 36$)
- 48 chocolates shared equally among 6 children $\rightarrow$ 8 each
- 30 students arranged in groups of 5 $\rightarrow$ 6 groups

Learning Outcome:

- Solve advanced division problems accurately
- Find missing numbers using multiplication
- Apply division in daily life situations
- Understand multiplication-division relationship
