

Seasons

Definition:

- **Seasons are regular changes in weather and temperature during the year (commonly: summer, monsoon/rainy, winter, spring/autumn depending on region).**

Explanation:

- **Seasons result from Earth's tilt and orbit around the sun; different places experience seasonal changes in temperature and rainfall. For Grade-1, focus on local seasons and what changes (temperature, plants, clothing, activities).**

Examples:

- **In many parts of India: hot summer, rainy monsoon, cooler winter.**

Activity:

- **Make a seasonal wheel showing activities, clothes, and foods for each season.**
