

Grade 2 – Science

Topic: Human Body

Intermediate Level

Explanation:

- The human body has internal organs that work inside our body.
- Important organs include heart, lungs, brain, and stomach.
- The heart pumps blood throughout the body.
- The lungs help us breathe.
- The brain controls our body activities.

Examples:

- When we run, our heart beats faster.
- We breathe in oxygen using our lungs.

Learning Outcome:

- Identify important internal organs.
- Explain simple functions of major organs.
