

Grade 2 – Science

Topic: Human Body

Advanced Level

Explanation:

- The human body is made up of different systems.
- The digestive system helps break down food.
- The respiratory system helps in breathing.
- The circulatory system moves blood through the body.
- The skeletal system gives shape and support.
- The nervous system controls body actions.

Examples:

- Food is digested in the stomach and intestines.
- Blood carries oxygen and nutrients to all body parts.
- Bones protect important organs like the brain and heart.

Learning Outcome:

- Describe major body systems.
- Explain how different systems work together.
