

Grade 2 – Science

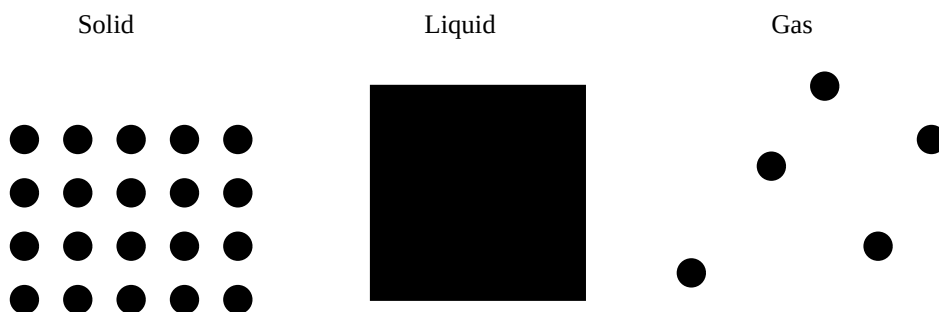

Topic: States of Matter

Intermediate Level

Explanation:

- Solids have tightly packed particles.
- Liquids have particles that are close but can move.
- Gases have particles that are far apart.
- Heating can change matter from solid to liquid (melting).
- Cooling can change liquid to solid (freezing).

Simple Diagram:

Examples:

- Ice melts into water.
- Water freezes into ice.
- Boiling water turns into steam.

Learning Outcome:

- Explain particle arrangement.
- Describe changes of state (melting and freezing).
