

Grade 2 – Science

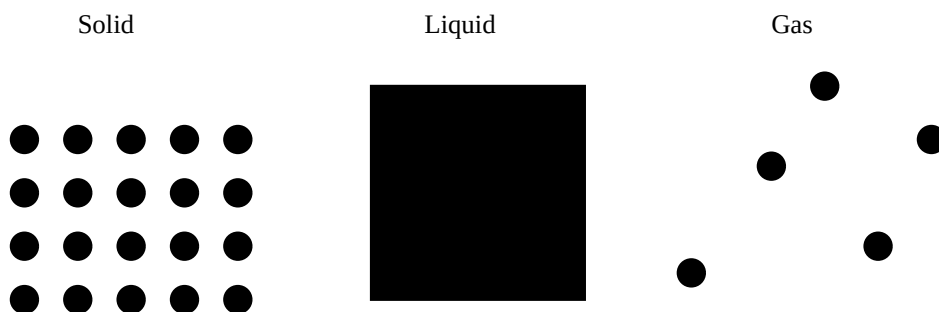

Topic: States of Matter

Advanced Level

Explanation:

- Matter is made up of tiny particles called molecules.
- Particles in solids vibrate in fixed positions.
- Particles in liquids move freely but stay close.
- Particles in gases move freely and spread out.
- Changes of state include melting, freezing, evaporation, and condensation.

Simple Diagram:

Examples:

- Evaporation: Water changes to vapor.
- Condensation: Water vapor changes to liquid.
- Heating increases particle movement.

Learning Outcome:

- Describe particle behavior in each state.
- Explain changes of state clearly.
